Executive Function Life Skill: Perspective Taking
Perspective Taking goes far beyond empathy. It involves figuring out what others think and feel and forms the basis for children’s understanding of the intentions of their parents, teachers and friends. Children who can take the perspectives of others are also much less likely to get involved in conflicts.

TIP:
The minnow offers a great illustration of how others have different perspectives when he hears frog’s descriptions of birds, cows and people as fish-like creatures. You can explore this concept with your child by asking:

• “Have you ever had an idea about something before you saw it? What were your ideas?”

• “How was the real thing different or the same as your ideas?”

SKILL:
Perspective Taking involves learning that others may have different knowledge than you do. To learn this, you have to put aside what you know and take the perspectives of others, which calls on Executive Function skills.

TIP:
A central concept of Fish Is Fish is that we sometimes want what other people have. The minnow wanted to go on land like the frog, but when he does, he discovers he can’t breathe there. When the minnow returns to the water, he discovers that his world “was certainly the most beautiful of all worlds.”

Ask your child if he or she has ever had similar experiences.

SKILL:
By talking about wanting what others have, you will help children learn about the perspectives of others.

TIP:
You can ask your child:

• “Why couldn’t the fish breathe on land?”

• “Are there things you can do that others can’t? How does that make you feel?”

SKILL:
Perspective Taking includes learning that others can do things that you can’t.
